

**OH** Office Hero

# Office Hero

Dispatch Smarter. Route Faster.

Field Service Management built for small teams who get things done

Plumbing

HVAC

Pest Control

Landscaping

**1-click**

Job dispatch to vehicle

**99.5%**

Uptime SLO

**< 500ms**

API response time (p95)

# Small service teams are running on spreadsheets and phone calls

## Today's reality

Dispatchers call technicians manually — missed or double-booked jobs when someone doesn't pick up

Routes planned on paper — no optimization, wasted fuel, customers kept guessing

Back-office data lives in ServiceTitan, PestPac, or a spreadsheet — re-keyed manually into every system

No visibility on where technicians are mid-day — no way to handle sick-day re-routes in real time

## With Office Hero

Select a pending job, choose a technician (or skip for now), and dispatch in one click — saga orchestration handles booking and route commit automatically

Route management built in — view all active routes, resequence stops with ↑↓ controls, and track progress stop by stop

Adapter layer ready for ServiceTitan, PestPac, and Jobber — connect credentials to activate the data flow

Day-of route adjustments in seconds — resequence stops or reassign an entire route from the admin dashboard without rebuilding from scratch

# One platform. Every field service workflow.

## Smart Dispatch

Search pending jobs, select a technician (optional), and dispatch with one click. Saga orchestration tracks every step — validate, book, commit — with live status updates.

## Live Route Management

Full route visibility with stop-by-stop progress. Resequence stops with ↑↓ controls. Routes auto-complete when the final stop is marked done. Every action timestamped.

## Back-Office Integration

Adapter layer ready for ServiceTitan, PestPac, and Jobber. All adapter calls are saga-coordinated with transactional outbox — zero data loss on integration failures.

## Recurring Contracts

Monthly, quarterly, or custom schedules. Jobs generate automatically on due date. Modify, pause, or renew contracts without re-entering customer data.

## Technician Mobile

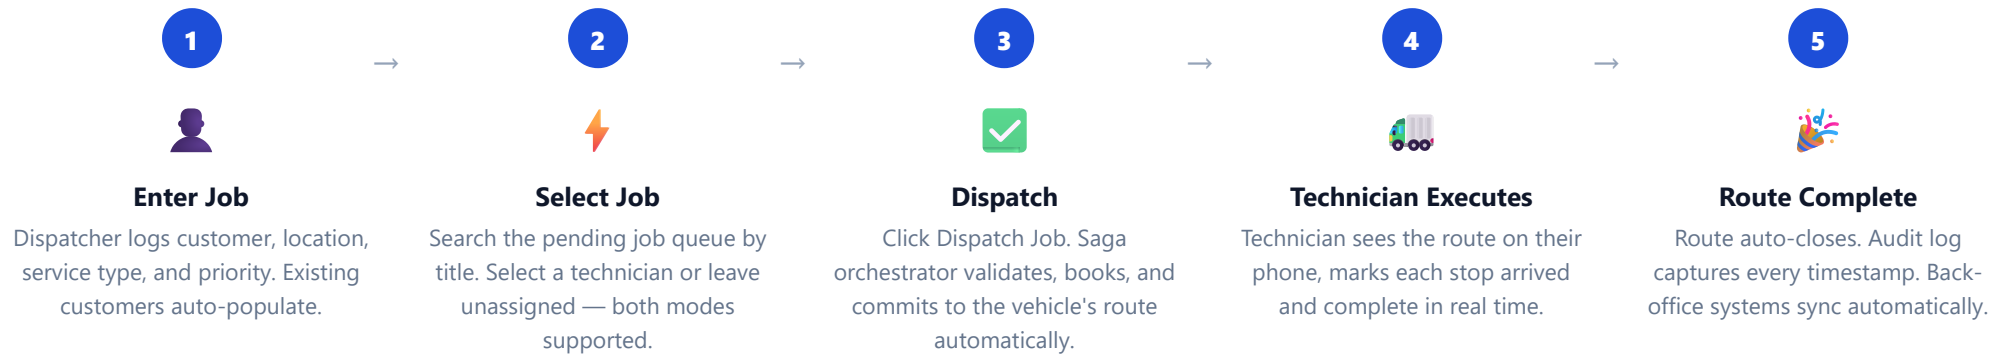

Mobile-responsive web view runs on any smartphone browser — no install required. Android native app (React Native Expo) available as a sideloadable APK for field crews.

## Multi-Tenant Security

PostgreSQL row-level security. Every tenant is completely isolated — no data leakage possible. JWT RS256 auth, role-based permissions, immutable audit log, and 4× daily CVE scanning.

# From customer call to completed job — five steps

**1-click**

Job dispatch to route

**2–3 min**

Typical dispatch time

**< 500ms**

API response time (p95)

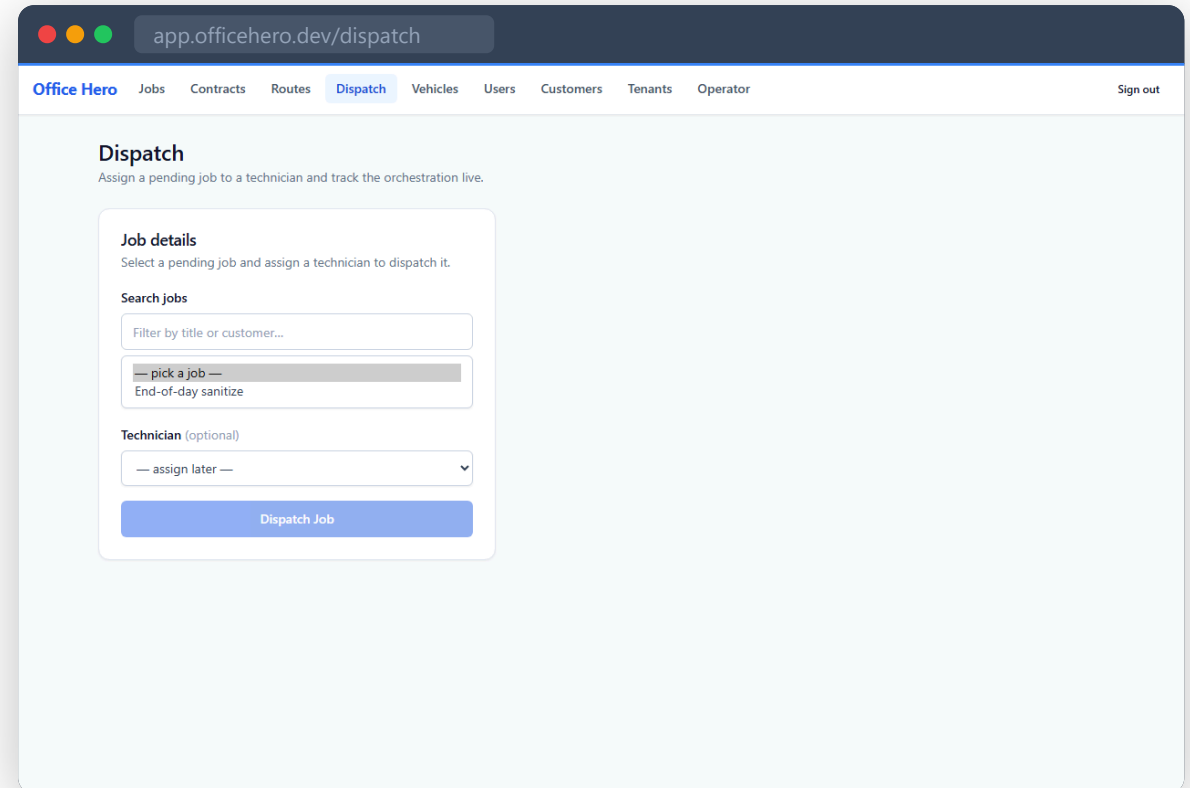

**100%**

Audit-logged operations

## FEATURE

# Smart Dispatch — Search, Select, Dispatch in One Click

- ✓ Search pending jobs by title — real-time filter narrows the list as you type
- ✓ Job details inline — see service type and customer before committing
- ✓ Assign a technician or leave unassigned — field crew can self-assign
- ✓ One-click dispatch — saga orchestrator validates, books, and commits automatically
- ✓ Live saga status panel — watch each step in real time on the same screen
- ✓ Dispatched job appears on Routes page — technician picks it up immediately
- ✓ Every dispatch is audit-logged with timestamp, actor, and outcome

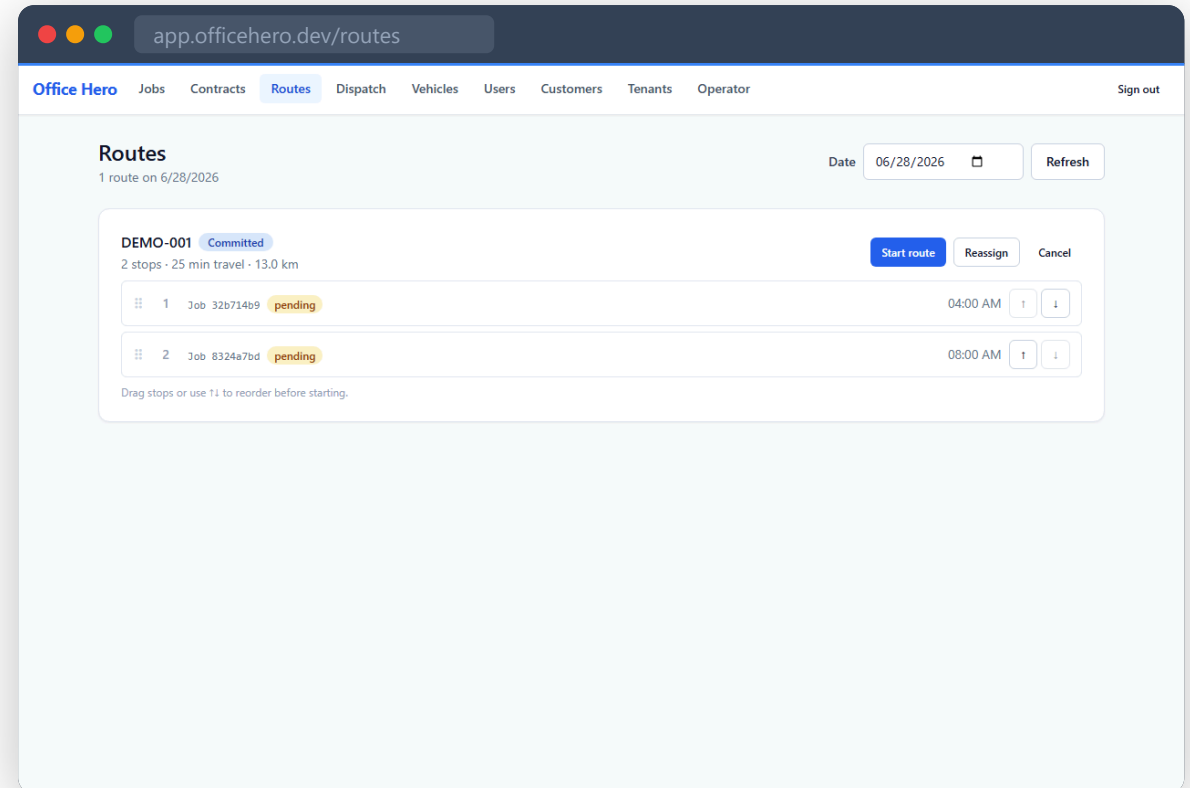

The screenshot shows a web application interface for "Office Hero". The browser address bar displays "app.officehero.dev/dispatch". The navigation bar includes links for "Office Hero", "Jobs", "Contracts", "Routes", "Dispatch" (which is highlighted), "Vehicles", "Users", "Customers", "Tenants", "Operator", and a "Sign out" button. The main content area is titled "Dispatch" with the subtitle "Assign a pending job to a technician and track the orchestration live." Below this, there is a "Job details" section with the instruction "Select a pending job and assign a technician to dispatch it." This section contains a "Search jobs" input field with the placeholder "Filter by title or customer...", a dropdown menu showing "— pick a job —" and "End-of-day sanitize", and a "Technician (optional)" dropdown menu showing "— assign later —". A blue button labeled "Dispatch Job" is positioned at the bottom of the form.

## FEATURE

# Route Management — Real-Time Visibility

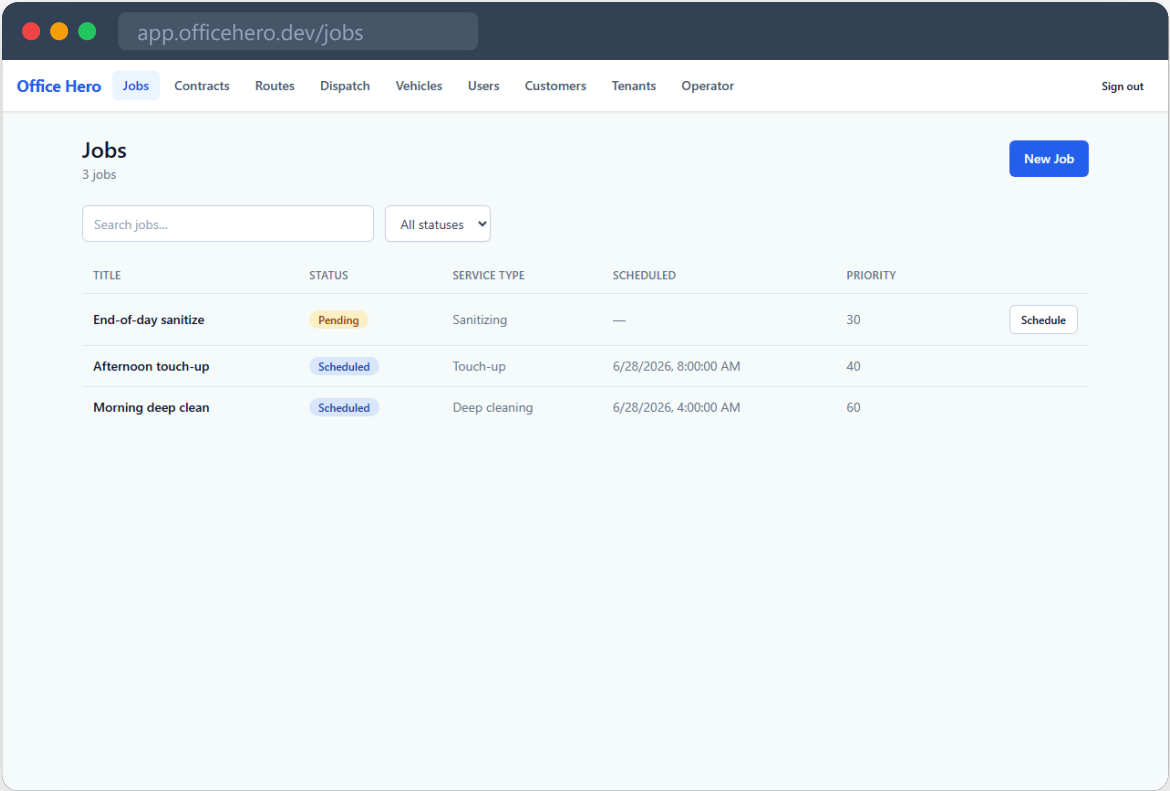

- ✓ All routes for any date — filter by vehicle, status, or crew member
- ✓ Stop-by-stop progress: Pending → Arrived → Complete → Skipped
- ✓ Resequence stops with ↑↓ controls and confirm the new order
- ✓ Start or cancel routes from the admin dashboard
- ✓ Route auto-completes when the final stop is marked done
- ✓ Actual arrival and completion times recorded on every stop
- ✓ Full route history — every action timestamped in the audit log

FEATURE

# Jobs & Customers — The Core Record

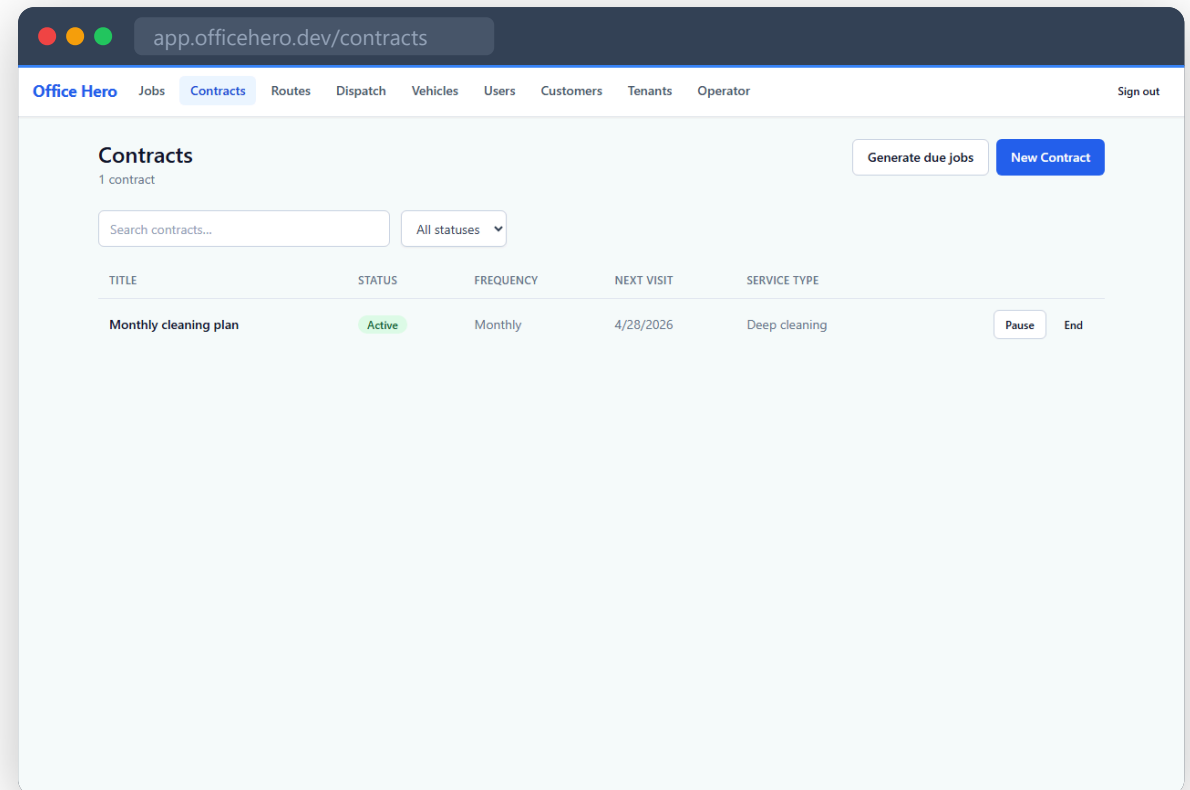

- ✓ Create jobs in seconds — customer, location, service type, priority
- ✓ Service type, priority, and notes captured on every job
- ✓ Job lifecycle: Pending → Scheduled → In Progress → Completed
- ✓ Filter jobs by status, service type, date, or technician
- ✓ Customer records with multiple service locations per account
- ✓ Auto-geocoding: enter an address, get GPS coordinates instantly
- ✓ Customer history — every job ever dispatched, searchable

## FEATURE

# Recurring Contracts — Set It and Forget It

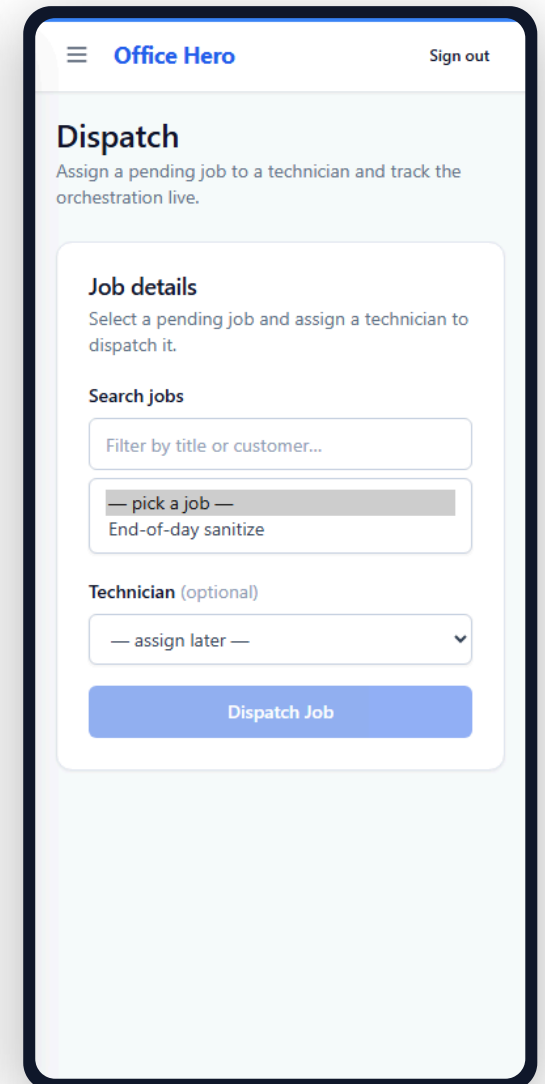

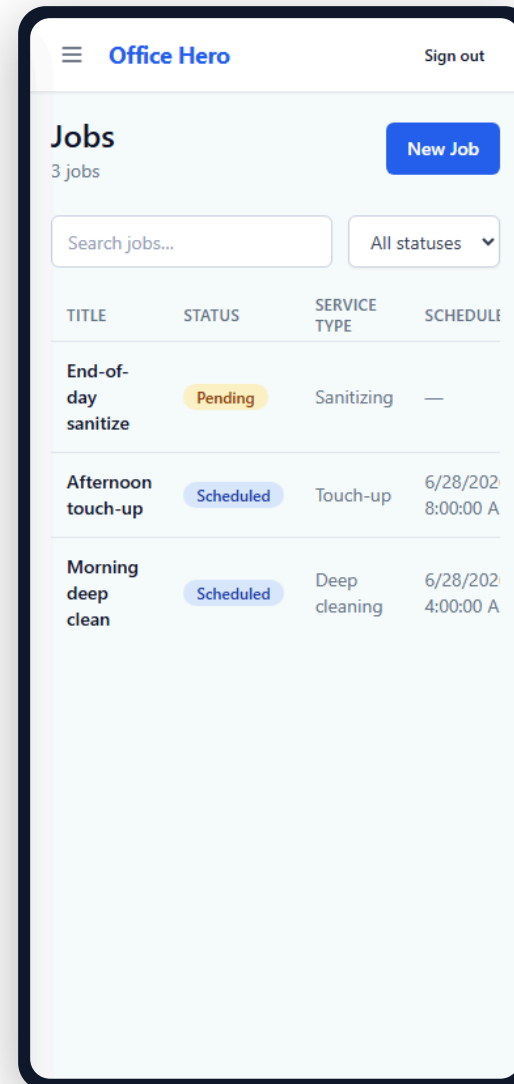

- ✓ Create service agreements with weekly, monthly, or quarterly schedules
- ✓ Jobs generate automatically when a contract comes due
- ✓ Pause or resume contracts without losing history
- ✓ Back-office adapter layer ready — connect credentials to sync contracts externally
- ✓ Bulk "generate due jobs" — process all overdue contracts in one click
- ✓ Customer and location pre-filled from the contract — zero re-entry
- ✓ Contract history and renewal tracking built in

## FEATURE

# Technician Mobile — Field-Ready on Any Device

- ✓ Android native app (React Native Expo) — no Play Store needed
- ✓ Mobile-optimized web view — works on any smartphone browser
- ✓ Full daily route with stop details, customer info, and notes
- ✓ One-tap Mark Arrived and Mark Complete — no forms to fill
- ✓ Mobile-responsive web view — all admin features available on any smartphone browser
- ✓ React Native Expo app — sideloadable APK for dedicated Android field devices

## Connect your existing back-office system

### ServiceTitan

Bi-directional job sync. Customers, locations, and jobs flow between platforms. Dispatch events trigger ServiceTitan work order updates automatically.

Integration ready — credentials needed

### PestPac

Service orders and customer accounts sync natively. Contract terms in PestPac map directly to Office Hero's contract model.

Integration ready — credentials needed

### Jobber

OAuth2 connection. Work requests, quotes, and jobs flow into Office Hero's dispatch workflow without re-entry.

Integration ready — credentials needed

### Office Hero as system of record

Don't have a back-office system? Office Hero stores everything natively — customers, contracts, jobs, vehicles, and routes. Add an external integration at any time without data migration. All adapter interactions are saga-coordinated with transactional outbox for zero data loss.

# Enterprise-grade security. Small-business price.

## Tenant Isolation

PostgreSQL row-level security enforces hard data boundaries. No tenant can ever read another tenant's records — even at the DB layer. Defense-in-depth at service layer too.

## JWT RS256 Auth + RBAC

15-minute access tokens, 7-day refresh. Eight predefined roles with fine-grained permission overrides per user. Every endpoint declares the minimum role and permission required.

## Immutable Audit Log

Every auth event, permission denial, data access, and admin action is appended to an append-only audit log. DB triggers prevent modification. Operator search and export available.

## Rate Limiting

All endpoints rate-limited by tier: auth (10 req/min/IP), writes (60/min/user), reads (300/min/user). Operators adjust limits live without restart. DDoS basic mitigation built in.

## Continuous CVE Scanning

pip-audit runs four times daily (06:00, 12:00, 18:00, 00:00 UTC). Critical vulnerabilities trigger immediate alerts. Bandit static analysis on every push.

## 99.5% Uptime SLO

Fly.io cloud hosting with health checks, Sentry error tracking, and hourly uptime monitoring. Structured JSON logs shipped to Grafana. HTTPS enforced; HTTP redirected.

READY TO GET STARTED?

# Let's get your team dispatching smarter.

Five companies are already waiting for production launch. Schedule a live demo and we'll walk through your workflow, answer your questions, and set up a trial account.

**Schedule a Live Demo →**

Typical onboarding: 30 minutes · No credit card for trial
